Parrott Canvas Goes Vertical

For more than 20 years Parrott Canvas has manufactured all types of bags for corporate promotions, special events, regattas, sports tournaments, catalog merchants, retailers, and the entertainment industry.

Parrott Canvas got their start in the marine canvas trade where the best materials and workmanship are indispensable due to the harsh environment where their products had to perform. Parrott Canvas applied this same philosophy to the design and manufacture of bags and luggage to help the company evolve into the present day business.

All of Parrott's Canvas products are made in their Greenville, NC facility. Their unique designs have been refined over the years with extensive customer input. Top quality fabrics, zippers, and fasteners are used without exception. Nearly every seam is taped and double stitched with heavy nylon thread for unsurpassed durability.

When Parrott Canvas wanted to improve productivity and make quick changeovers, they contacted J & D Associates about investing in a Vertical Carousel. Parrott Canvas installed the Vertical Carousel adjacent to their assembly area. This location enables them to take material directly to the production table and

quickly change material at the touch of a switch without causing delays in getting the right material they want when they need it.

Parrott Canvas loads the Vertical Carousel with the fabric they will be using before they begin their manufacturing process. The material is loaded onto a 'V-Dolly' then quickly onto the carousel in a safe and ergonomic process. This can be done by one person. After the Vertical Carousel is loaded, Parrott Canvas can quickly change fabrics as their production cycle requires.

J & D Associates Motorized Rolled Goods Vertical Carousel is perfect for handling fabrics in any production setting where quick set up and repeated retrieval of different fabrics is required. A J & D Associates Vertical Carousel also maximizes your existing shop floor space. You can save 70% of your existing shop floor space with a Vertical Carousel from J & D Associates! Go vertical!

Stack Racks Offer Storage Solutions for a Variety of Products

While storage space within your facility shrinks, picking and staging product orders slows, and material damage increases. One way to solve all three is to think about cubing your available space thus increasing your profits. J & D Associates has designed a cart and stack rack product line specifically as a solution to these.

plywood and the four (48" h) legs can be removed for easy bulk loading or unloading. Load capacity is 3,600 lbs.

Then there is the "Portable Cart" - the perfect cart for picking, storing or displaying doors and windows. This cart has three removable sides with a deck measuring 42" d x 96" w and four heavy duty caster wheels capable of handling 3,600 lbs. of product. Dividers

Millwork Stack Rack & Supplementary Dolly

Our two stack racks designed specifically for door and window storage may also be converted into a picking cart by using the "Stack Dolly". Choose between the three-sided 46" d x 92" w (our most popular unit) or the slightly larger 48" d x 98" w unit) for the best means of storing or staging your millwork. Both units have c-channel mounting brackets for positive-foundation stacking allowing for the stacking of three-units high fully loaded. The ends and back bars may be removed for easy storage when not in use. Dividers may be purchased to separate and protect the material on the rack. The material weight bearing capacity is 2,000 lbs. per rack. Both units come with 'fork-stirrups' throughout to allow for secure movement of the rack by a forklift, even when the rack is unbalanced.

Carts

Carts

J & D has two carts to help you pick product in your facility and stage the orders for pick-up or delivery – without waiting on a forklift! They also act as the perfect mobile merchandiser for lumber or millwork – load and move them into place in your showroom for product highlighting.

First the "Lumber Dolly" – this 'lumber cradle on wheels' has four heavy-duty caster wheels and is capable of accepting full units of lumber. The platform can be decked with

may be purchased to add to this cart to separate product for easier handling or sorting.

Millwork Stack Racks

Stack Rack (continued)

Conventional Design – ‘Target’ Stack Rack Line

cure movement of the rack by a forklift. Capacity is 4000 lbs.

Store or handle virtually any product in your business – decking, shingles, pipe or lumber with this line of stack racks. Offered in eight different deck sizes, all are capable of being multiple-stacked up to six high. The overall stacked height is dependent upon the length of the legs, however, the total stack height should not exceed 16 feet. The legs are removable for storage when not in use or for loading/unloading. All units come equipped with ‘fork stirrups’ throughout to allow for secure movement of the rack by a forklift. Capacity is 4,000 lbs.

Target Stack Racks

Extra Long Stack Racks

Extra Long Stack Racks

Perfect for the storage and staging of those extra-long, non-rigid, hard-to-handle products like Trex, Azek or PVC. Bolt together construction is designed to accept full units of product easily. All units come equipped with ‘fork-stirrups’ throughout to allow for se-
